

**MAGNAGRAPH® - SAMPLE GRAPH**

Liver toxicity – liver congestion is always associated with congestion of the lymphatic system

Dysbiosis – 'noise' through the wave from here may reflect a state of Dysbiosis (e.g. presence of candida or parasites)

Chemical imbalance – Notches in the apex reflect chemical imbalances, which may be linked to hormonal disturbances, nutritional deficiencies, toxicities or allergies

ATP Ramp – loss of an ATP ramp (flat) is characteristic of adrenal stress and exhaustion

Lymphatic congestion – is shown by broadening of the descending waveform. The apex represents sinus, the F line show the chest, Lines D-C represents Liver

Allergies (Acute) – acute allergies are indicated as increased pulse rate and wide spread irregularities or 'noise'

Malabsorption – a small notch at the start of the pulse wave may represent malabsorption of nutrients

Spleen – this may reflect stress with the immune system

Findings	Poor	Fair	Good	Excellent	What you may need
ATP Ramp					VITAMIN b 12 in methocobalamin form to ^ intracellular ATP production
Spleen					Beta carotene in the form of Algae to reduce oxidative stress
Lymphatic					Exercise to improve venous return
Allergies					Zinc to stabilise mast cell production of histamine
Liver					Phyto pro to improve glutathione levels and hepatoprotectives
Dysbiosis					Lactate free probiotic and pre biotic
Chemical imbalance					Hormone testing
Malabsorption					Gut function test
